

Open APIs

Everyone's experienced buyer's remorse. After the excitement of a purchase wears off, you're faced with the reality that what you bought falls short in key areas. Why? Because you didn't have full information or, worse, you didn't know the right questions to ask.

In business, buyer's remorse has huge implications because you're buying big ticket items and, likely, committing to multi-year agreements that link your success to your vendors' capabilities. If you don't get what you expected, the consequences can be significant—even devastating.

But, what if you knew everything—literally everything—about your purchase before you committed? What if your business had the capability to test drive all the features and functionality before you made a buy decision? What if there weren't any surprises?

*What if you knew everything—
literally everything—about
your purchase before
you committed?*

Breaking Barriers

Galileo has removed the surprises for businesses handling payments by opening our APIs and providing access through our website to virtually anyone—clients, prospects, students and freelance developers. And, we've created a robust sandbox that exactly simulates Galileo's live operating environment. Now, any developer—whether a tech company, a large bank or just two guys in a garage—can code to our APIs and use our sandbox to test concepts, at will, at various stages of development.

When we say our open APIs and sandbox are the best developer tools available, you can take us literally. For example, our developer-centric design instantly creates code fragments with a single click, customized to your credentials, in popular programming languages for any API method or function, cutting development time to almost zero. It also includes a powerful

Open APIs

tool to authenticate users, administer users of various groups and, most importantly, see published APIs, complete with full interface specifications, along with viewing API traffic flow with Galileo.

And, the best part: Our open APIs and sandbox can provide complete flexibility and full stack support for your ongoing relationship with Galileo, so you can focus on your core strengths and what sets you apart. This includes fully controlling and managing your customers' entire user experience, leaving us to put our 17+ years' experience and secure system to handle non-customer-focused activities, like network and bank connectivity and relationships, compliance, security, funds loading, identity checks and more.

The Only Surprise Is How Creative You Can Be

What do Galileo's open APIs and robust sandbox mean practically?

First, while you're contemplating using our services, you can experience exactly what it's like to work with us—before signing an NDA or agreement—without surprises.

Second, your developers can get to work immediately while business arrangements are finalized—minimizing launch time, perhaps by months, once agreements are executed.

And, third, our open APIs and sandbox are unleashing the creativity of your developers (and the greater payments community) so clients and others can innovate without limitations in a totally secure environment to create their visions of what's next.

Move Forward with Foresight

Opening the most advanced platform through our APIs and creating a sandbox where your developers can create and experiment to their hearts' content is putting our money where our mouth is in terms of our commitment to our clients, future clients and the creativity of the payments industry.

Expand Your Universe

At Galileo, we don't believe in placing limits on our clients' creativity nor on ours. Our passion is innovating to empower our clients to achieve their aspirations.

We're fintechs' tech.
